hypothetical protein alr3067 (imported] - Nostoc sp. (strain PCC 7120)
C.Species: Nostoc sp.
A.Note: Nostoc sp. strain PCC 7120 is a synonym of Anabaena sp. strain PCC 7120
C.Date: 14-Dec-2001 #sequence_revision 14-Dec-2001 #text_change 30-Jun-2002
C.Racession: AD2189
R.Kaneko, T.; Nakamura, Y.; Wolk, C.P.; Kuritz, T.; Sasamoto, S.; Watanabe, A.; Irit, Nakazaki, N.; Shimpo, S.; Sugimoto, M.; Takazawa, M.; Yamada, M.; Yasuda, M.; Tabat DNA Res. 8, 205-213, 2001
A.Title: Complete Genomic Sequence of the Filamentous Nitrogen-fixing Cyanobacterium A.Reference number: AB1807; MUID:21595285; PMID:11759840
A.Recession: AD2189
A.Status: preliminary
A.Residues: 1-323 <KUR>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Glycosyltransferase BH3713 [imported] - Bacillus halodurans (strain C-125)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  hypothetical protein alr3073 [imported] - Nostoc sp. (strain PCC 7120)
hypothetical protein alr3073 [imported] - Nostoc sp. (strain PCC 7120)
6. Species: Nostoc sp. strain PCC 7120 is a synonym of Anabaena sp. strain PCC 7120
6. Date: 14-Dec-2001 #sequence_revision 14-Dec-2001 #text_change 30-Jun-2002
6. Accession: ABA2190
8. Kaneko, T.; Nakamura, Y.; Wolk, C.P.; Kuritz, T.; Sasamoto, S.; Watanabe, A.; Irigus Nakazaki, N.; Shimpo, S.; Sugimoto, M.; Takazawa, M.; Yamada, M.; Yasuda, M.; Tabatai DNA Res 8, 2055-213, 2001
A;Title: Complete Genomic Sequence of the Filamentous Nitrogen-fixing Cyanobacterium A; Reference number: AB1807; MUID:2159285; PMID:11759840
A;Accession: AB2190
A;Accession: AB2190
A;Status: preliminary
A;Molecule type: DNA
A;Residues: 1-324 <RURS
A;Residues: 1-324 ×RURS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         16;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A;Cross-references: GB:BA000019; PIDN:BAB74772.1; PID:g17132167; GSPDB:GN00179 A;Experimental source: strain PCC 7120 C;Genetics: A;Genet alr3073

                                                                                                                   FUNCTION: REQUIRED FOR EFFICIENT DNA REPAIR; IT CATALYZES THE UNWINDING OF DOUBLE-STRANDED DNA AND THE CLEAVAGE OF SINGLE-STRANDED DNA AND IT STIMULATES LOCAL GENETIC RECOMBINATION.
ALL OF THESE ACTIVITIES REQUIRE CONCOMITANT HYDROLYSIS OF ATP (BY SIMILARITY).
CATALYTIC ACTIVITY: Exonucleolytic cleavage (in the presence of ATP) in either 5'- to 3'- to 5'-direction to yield 5'-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 YIIKCLDRKQSFKTLNYILSSKILNVPWNLQRILIIKQDKICLIEEFIENIIVLLEKNEIT
